

I PUTU SAPUTRAYANA

Software Engineer

hello@iyansr.id | +6282346357644 | Indonesia

Portfolio | **GitHub** | **LinkedIn**

EDUCATION

STMIK Catur Sakti Kendari

Information Systems Bachelors

GPA: 3.89 of 4.00

Kendari, Indonesia

2023 - 2026

EXPERIENCE

Forbes Predict by Axiom | Fullstack Engineer (Contract)

New York, Remote | 2025 - Present

- Built a compliance and privacy portal from scratch Firebase auth, TanStack Router, Cloudflare Workers + D1, and automated email workflows handling GDPR/CCPA data subject requests end-to-end for users.
 - Shipped an interactive prediction widget (React + TypeScript) embedded across Forbes properties, serving **140M+ monthly readers**.
 - Built and shipped the admin portal for prediction market operations CRUD management, deep-linking, Cloudflare Worker API endpoints.
 - Designed and deployed the company landing page (axiomcasts.com) with Astro + Cloudflare Workers, from mockup to production
- All work done with TypeScript monorepo (pnpm workspaces) React/TanStack Router frontend, Cloudflare Workers backend, D1/SQLite, Playwright E2E, Storybook. Contributed across every layer including CI/CD. AI tooling (Claude Code, OpenCode) used daily for scaffolding, refactoring, and test generation.

Xellar / Yapp | Senior Software Engineer

Remote, Indonesia | October 2024 - Present

- Built Yapp.ink, an all-in-one creator platform, from zero to **40,000+ users** sole frontend owner of the creator dashboard: course builder (chapters/videos/files), product and order management, wallet and revenue UI, promo campaigns, event ticketing with after-sales, affiliate system, live streaming config, and Discord-integrated membership tiers.
- Shipped the buyer-facing storefront with multi-currency checkout including QRIS for Indonesian payments, per-creator theme customization, and mobile-first responsive design.
- Built a product analytics suite with interactive charts and CSV export, giving creators revenue and performance insight.
- Dockerized services on ECS/EC2 behind an Application Load Balancer with auto-scaling, frontend on Amplify, achieving zero-downtime releases at 1-3 deploys per day.
- Developed the Xellar embedded wallet SDK (TypeScript) and Xellar Kit, a wallet-connection component library comparable to RainbowKit/ConnectKit, adopted hundreds of external teams.
- Built and maintained the embedded wallet API service (Node/Fastify) and internal dashboard.

Playard Indonesia | Software Engineer - Part Time

Indonesia | November 2023 - June 2024

Building BasketBall Pickup Game mobile App.

- Develop and Maintain app with React Native, Typescript, Firebase
- Distributing App to the Playstore and App Store
- Performing Code Review to ensure code quality

Pintu (Pintu Digital Pte. Ltd) | Frontend Engineer Web3

Remote, Indonesia | August 2021 - March 2024

- Built and maintained features for one of Indonesia's largest crypto exchanges, serving **1 million** users across mobile and web.
- Joined the Web3 team to ship a mobile Web3 wallet wallet connect flows, transaction signing, chain support.
- Optimized Mobile Bundle Size by Reducing external package to build our in house solution.
- Authored E2E test coverage for onboarding, withdrawal, transactions flows on Web3 Wallet.
- Wrote functional requirement docs and implementation guides used by [N] engineers.

Artpedia NFT Marketplace | Fullstack Developer (Part-Time)

Remote, Indonesia | February 2022 -

October 2022

Artpedia is Founded by known Indonesian tech influencer, Arjuna Sky Kok

- Develop NFT Marketplace website using Next.JS
- Connect to smart contract using Ether.JS
- Help backend team write code using NodeJS and Express JS

DOOgether | Frontend Engineer

Jakarta, Indonesia | January 2020 - August 2021

- Promoted to lead the frontend team within 6 months, managing 3 engineers.
- Built and shipped a mobile app from scratch to the App Store and Play Store, reaching 10k+ downloads.
- Partnered directly with C-level leadership and UI/UX on product direction and release planning.

Contract & Part-Time Engagements | Software Engineer

Remote | 2023 - 2024

- **Amori.app (USA, Remote)** Built the React Native app for an AI dating-coach product, working directly with the CEO on pixel-perfect implementation.
- **Mighty Jaxx (Singapore, Remote)** Shipped crowdfunding platform features in Next.js/TypeScript for a collectibles brand
- **Playard Indonesia** Built and published a basketball pickup-game app (React Native, Firebase) to both app stores.
- **Stealth Startup** Built an AI financial-planning app across React Native and Next.js alongside the founder.

SKILLS

Programming Languages:	Typescript, Javascript, Java, Solidity, Python, HTML/CSS, SQL
Libraries/Frameworks:	React, Next.Js, React Native, TanStack Router, TanStack Query, Redux, Astro, TailwindCSS, shadcn/ui, Styled Components, Node.js, Hono, Fastify, Express, Tauri, Electron
Tools / Platforms:	Cloudflare, Docker, Vercel, AWS
Databases:	MySQL, PostgreSQL, MongoDB, Firebase, Supabase

PROJECTS / OPEN-SOURCE

Nodus Studio | Link

Tauri V2, React, Typescript, Hono, Cloudflare Worker

Solo Creator & Engineer

A free Windows desktop app for gamers: always-on background gameplay capture with instant replay clipping, plus a node-based editor that reframes clips into vertical 9:16 video for TikTok, Reels, and Shorts.

- Built a continuous replay buffer running GPU-encoded capture at 1080p/60fps/25Mbps under live gameplay, one hotkey banks the last 30s, 1m, or 2m without writing to disk until the user asks.
- Designed and built a node-graph editor in React wire-based connections between gameplay sources, crop trackers, HUD masks, and effects, with reusable saved templates so non-editors can drop a clip in and export.
- Shipped per-game recording profiles, local-first storage (nothing leaves the machine unless the user opts in per clip), and opt-in cloud sharing via Hono on Cloudflare Workers.
- Handled the full release pipeline: Windows installer packaging, GitHub-based distribution and auto-update, and the marketing site.
